Listing of Claims

Please replace all prior versions of claims with the following listing of claims:

Claims 1-20 (cancelled).

21. (Currently Amended) A server system providing integrated scheduling and calendaring capability comprising:

a server;

at least one database associated with the server, ~~at least one~~ a plurality of non-markup language ~~object~~ objects stored in the at least one database, ~~at least one of the~~ non markup language ~~object~~ objects comprising scheduling and calendaring information for at least one user; and

wherein the server: ~~i) receives a request for the~~ enables the user to select at least one non-markup language object from the plurality of non-markup language objects; ~~and ii) retrieves the at least one non-markup language object requested; and~~ iii) based on the selection of the user, translates the at least one selected non-markup language object to at least one markup language object.

22. (Previously Presented) The system of claim 21, wherein the at least one markup language object is displayed using a browser.

23. (Previously Presented) The system of claim 21, wherein the server comprises:

a server module;

an interface module comprising a markup language to non-markup language translator; and

a non-markup language database server module.

24. (Previously Presented) The system of claim 23, wherein the server module comprises an HTTP server.

25. (Currently Amended) The system of claim 21, wherein the server is operable to:

i) receive a URL-based ~~request~~ selection from a browser for the ~~at least one selected~~ non-markup language object ~~from a browser~~; and

ii) determine a location of the at least one non-markup language object.

26. (Previously Presented) The system of claim 21, further comprising a passing module that passes the at least one markup language object to a browser.

27. (Currently Amended) A server system providing integrated scheduling and calendaring capability comprising:

storing means for storing ~~at least one~~ a plurality of non-markup language object objects, wherein the at least one of the plurality of non-markup language object objects comprises scheduling and calendaring information for at least one user;

~~request-receiving~~ selection enabling means, in communication with the storing

means, for ~~receiving a request for the at least one~~ enabling the user to select at least one non-markup language object from the plurality of non-markup language objects;
and

~~retrieving means for retrieving the at least one non-markup language object requested;~~

translating means for translating the ~~at least one~~ selected non-markup language object to at least one markup language object, based on the selection of the user.

28. (Previously Presented) The system of claim 27, wherein the at least one markup language object is displayed by a presenting means for presenting the at least one markup language object.

29. (Currently Amended) The system of claim 27, ~~wherein the receiving means~~ further comprising retrieving means for retrieving the selected non-markup language object that comprises:

markup language object receiving means for receiving markup language objects;

markup language translating means for translating markup language objects to non- markup language objects and non-markup language objects to markup language objects; and

non-markup language object receiving means for receiving non-markup language objects.

30. (Previously Presented) The system of claim 29, wherein the markup

language object receiving means comprises an HTTP server.

31. **(Currently Amended)** The system of claim 27, wherein the request-receiving selection enabling means is operable to:

- i) receive from a presenting means a URL-based ~~request for~~ selection of the at least one selected non-markup language object; and
- ii) determine a location of the at least one non-markup language object.

32. **(Previously Presented)** The system of claim 27, further comprising a passing means for passing the at least one markup language object to a presenting means for presenting the at least one markup language object.

33. **(Currently Amended)** A method for providing a server with integrated scheduling and calendaring capability comprising the steps of:

storing ~~at least one~~ a plurality of non-markup language object objects in at least one object store, wherein the at least one of the non-markup language object objects comprises comprise scheduling and calendaring information for at least one user;

~~receiving a request for the~~ enabling the user to select at least one non-markup language object from the plurality of non-markup language objects; and

~~accessing the at least one object store to access the scheduling and calendaring information from the at least one non-markup language object;~~

~~retrieving the at least one non-markup language object;~~

based on the selection of the user, translating the at least one selected non-

markup language object to at least one markup language object.

34. **(Previously Presented)** The method of claim 33, further comprising the step of displaying the at least one markup language object.

35. **(Currently Amended)** The method of claim 33, ~~wherein~~ further comprising the step of receiving uses:

~~markup language object receiving means for receiving the at least one markup language object;~~

~~translating means for translating the at least one markup language object to at least one non-markup language object and non-markup language to markup language;~~
and

~~non-markup language object receiving means for receiving the at least one non-markup language objects object.~~

36. **(Currently Amended)** The method of claim 35, wherein ~~the markup language object receiving means~~ receiving at least one markup object comprises receiving at least one markup object with an HTTP server.

37. **(Currently Amended)** The method of claim 33, wherein the step of ~~receiving~~ enabling comprises the steps of:

i) receiving from a presenting means a URL-based ~~request for~~ selection of the at least one selected non-markup language object; and

ii) determining a location of the at least one non-markup language object.

38. (Currently Amended) The method of claim 33, further comprising ~~the step of~~
~~passing the at least one markup language object to a presenting means for presenting~~
the at least one markup language object.

39. (Currently Amended) A processor readable medium having processor
readable code embodied therein for providing a server with integrated scheduling and
calendaring capability, the medium comprising:

processor readable code for causing a processor to store ~~at least one~~ a plurality
of non-markup language object objects in at least one database, ~~the~~ at least one non-
markup language object of the plurality of non-markup language objects comprising
scheduling and calendaring information for at least one user;

processor readable code for causing a processor to ~~receive a request for the~~
enable the user to select at least one non-markup language object from the plurality of
non-markup language objects; and

~~processor readable code for causing a processor to access the scheduling and~~
~~calendaring information from the at least one non-markup language object;~~

~~processor readable code for causing a processor to retrieve the at least one non-~~
~~markup language object from the at least one database; and~~

processor readable code for causing a processor, based on the selection of the
user, to translate the ~~at least one~~ selected non-markup language object to at least one
markup language object.
